

## ABOUT AN ERZGEBIRGE FAMILY'S WAY IN MANUFACTURING WOODEN FOLK ART

### MUELLER ECO POLICY

At Mueller Kleinkunst we strive to offer our customers articles of the highest quality both in craftsmanship & design. Our concern for the environment is also fundamental to our product philosophy. At all stages of production this concern is a key part of our planning.

### SUSTAINABILITY

All the wood used in our articles is from certified, sustainable sources, thus ensuring our activities are not exploiting precious resources.

Since our articles are finely detailed and often delicate they need careful packing. We use recycled packing materials where possible and all our packing materials can be recycled.

### ENERGY USE

We strive constantly to find ways to improve our energy efficiency. For example, all waste wood, shavings and sawdust are used for heating our workshop by using a modern, efficient heating system.

Within our workshop we have invested heavily in hi-tech, modern machinery, not only to improve quality but to reduce energy consumption.

We are always looking for new solutions to reduce our reliance on fossil fuels. Shortly we shall be trialling a new way of generating some of the electricity needs, using waste from our production process.

### LOCAL JOBS FOR LOCAL PEOPLE

We at Mueller have over 100 years of proud tradition of making quality articles in Seiffen. Our workforce is local which means no long journeys to work, less pollution and a better community.

Mueller Kleinkunst is proud of its products and proud of its environmental policies. We hope you, our customer, enjoy your product even more in knowing that we have done our best to look after the world in which we live.
